Lab Scenario

Working as part of the PrioritZ fusion team you will be setting up your Power Platform development environment. You will import the current solution and explore the current state of the PrioritZ apps, flows and tables. You will be also adding a column to a table and modifying the app to use it.

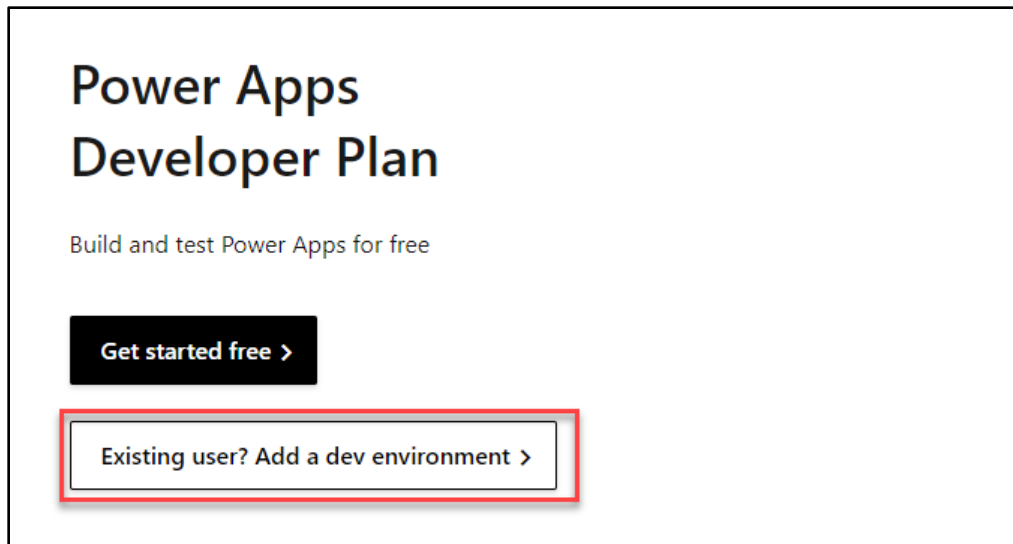

Exercise 1 - Create Dev environment

In this exercise, you will create a Power Platform developer environment. You will do all the development work for this course in this environment. You will also be assigned a test environment for use in the ALM labs.

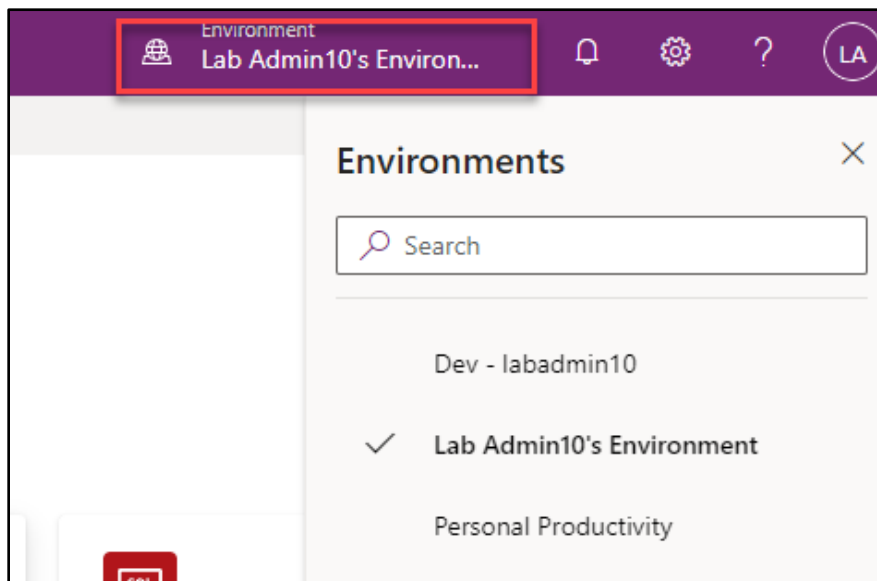

Note: Do not use an existing environment.

Task 1: Create dev environment

1. Navigate to [Power Apps Developer Plan](#)
2. Select **Add a dev environment**.

3. Sign in if prompted.
4. Select your country and click **Accept**.
5. You should be navigated to the new dev environment created for you. Select the new environment.

6. Expand **Dataverse** and select **Tables**.
7. You should see several Dataverse tables that are created with every environment.

The screenshot shows the Power Apps maker portal interface. On the left is a navigation pane with options: Home, Learn, Apps, Create, Dataverse (selected), Tables (selected), Choices, and Dataflows. The main area displays a table of Dataverse tables. At the top of the main area are tabs for '+ New table', 'Data', 'Azure Synapse Link', and 'AI Builder'.

Table	Name
Account	account
Address	customeraddress
Appointment	appointment
Attachment	activitymimeattachment
Business Unit	businessunit
Contact	contact

Exercise 2 - Import starting solution

In this exercise, you will import a solution into your dev environment. This solution contains the current PrioritZ apps, flows and Dataverse tables.

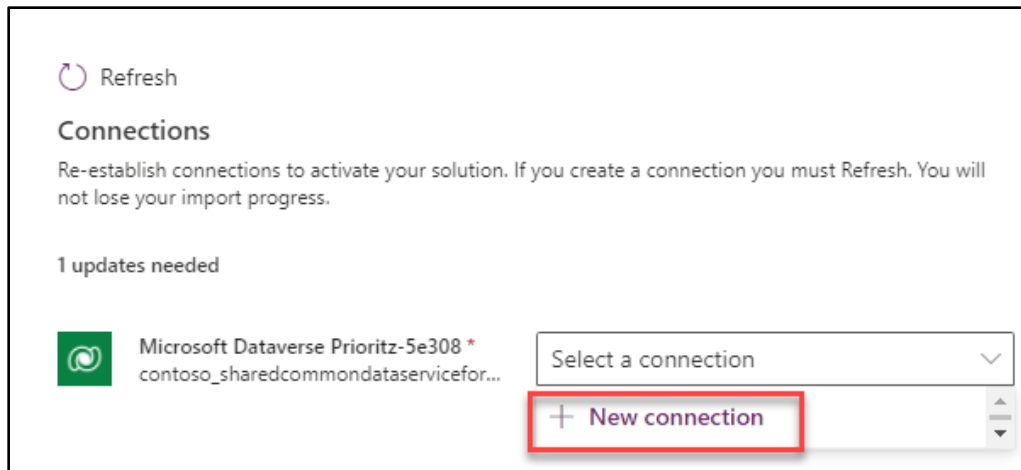

Task 1: Import solution

1. Navigate to [Power Apps maker portal](#) and make sure the development environment is selected.
2. Select **Solutions** and click **Import**.
3. Click **Browse**.
4. Go to the lab resources folder, select the **PrioritZ_solution.zip** file, and click **Open**.
5. Click **Next**.

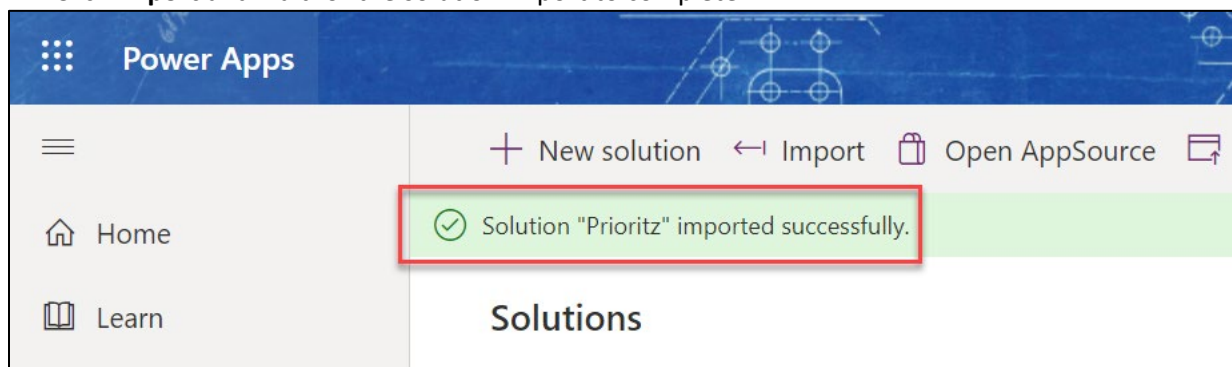

The screenshot shows the 'Import a solution' dialog box. It has a title bar with a close button (X). The content includes:

- Environment:** Lab Admin10's Environment
- Select a file:** Browse for the solution file to import.
- A **Browse** button and the filename **PrioritZ_solution.zip**.
- At the bottom, **Next** and **Cancel** buttons.

6. Click **Next**.
7. Click on the **Select a connection** dropdown and the select **+ New connection**.

8. Click **Create**.
9. Sign in if prompted.
10. Close the connections browser window or tab.
11. Click **Refresh**.
12. Click **Import** and wait for the solution import to complete.

13. You should now see the solution you imported in the list of solutions.
14. Do not navigate away from this page.

Exercise 3 - Review solution components

In this exercise, you will review the components of the solution you imported, run a flow that will add sample data to your environment, and test the applications in the solution.

Task 1: Review solution components and run flow

1. Review data model diagram

2. Open the **PrioritZ** solution you imported.

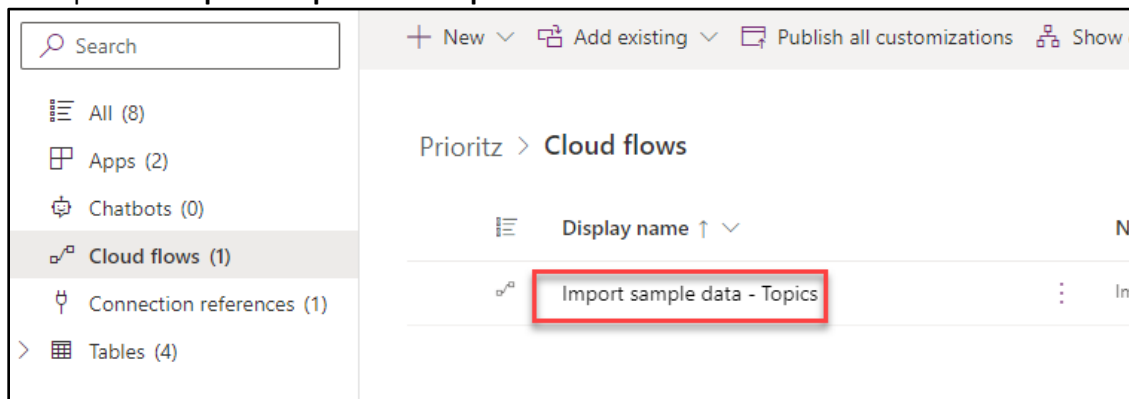

Solutions		
Display name		Name
PrioritZ	...	PrioritZ
Power Apps Checker Base	...	msdyn_PowerAppsC...
Power Apps Checker	...	msdyn_PowerAppsC...

- Expand **Tables** and select the **PrioritZ Topic** table.
- Select the **Columns** tab and review the columns of the **PrioritZ Topic** table. The standard columns are built-in, and all tables have them. The custom columns were created by the team for this application.
- Select the **Relationships** tab and review how this table is related to other tables.

Display name	Relationship name	Related table	Relationship type	Type	Custom
Created By	lk_contoso_prioritztopic_createdby	User	Many-to-one	Standard	✓
Created By (Delegate)	lk_contoso_prioritztopic_createdonbehalfofby	User	Many-to-one	Standard	✓
Modified By	lk_contoso_prioritztopic_modifiedby	User	Many-to-one	Standard	✓
Modified By (Delegate)	lk_contoso_prioritztopic_modifiedonbehalfofby	User	Many-to-one	Standard	✓
Owning Business Unit	business_unit_contoso_prioritztopic	Business Unit	Many-to-one	Standard	✓
Owning Team	team_contoso_prioritztopic	Team	Many-to-one	Standard	✓
Owning User	user_contoso_prioritztopic	User	Many-to-one	Standard	✓
PrioritZ Topic	contoso_PrioritZTopic_PrioritZTopicParticipant	PrioritZ Topic Participant	One-to-many	Custom	✓
PrioritZ Topic	contoso_PrioritZTopic_PrioritZTopicItem	PrioritZ Topic Item	One-to-many	Custom	✓
Record	contoso_prioritztopic_SyncErrors	Sync Error	One-to-many	Custom	✓
Regarding	contoso_prioritztopic_ProcessSession	Process Session	One-to-many	Custom	✓

6. Select **Cloud flow**.

7. Open the **Import sample data – Topics** flow.

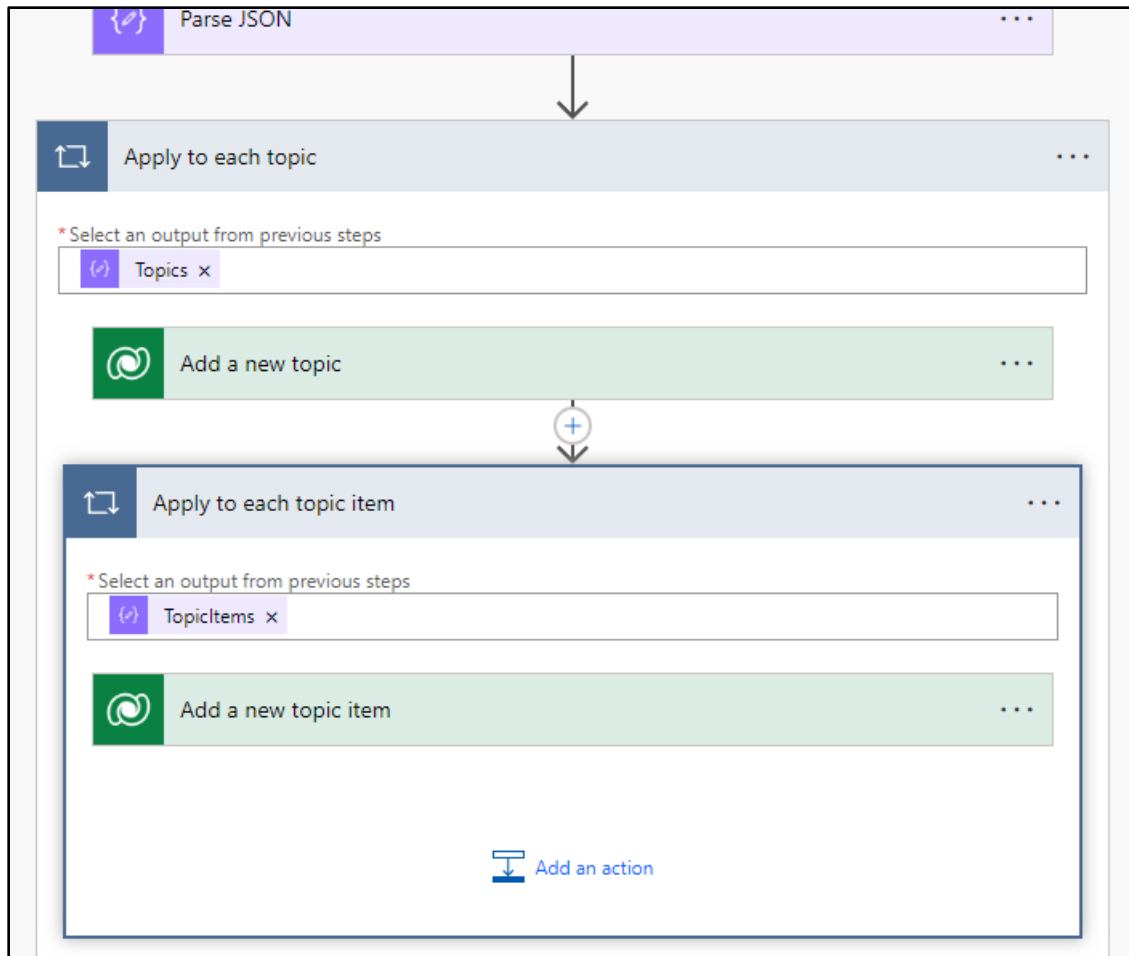

8. Click **Edit**.

9. Expand the **Parse JSON** step and review the data this flow will create.

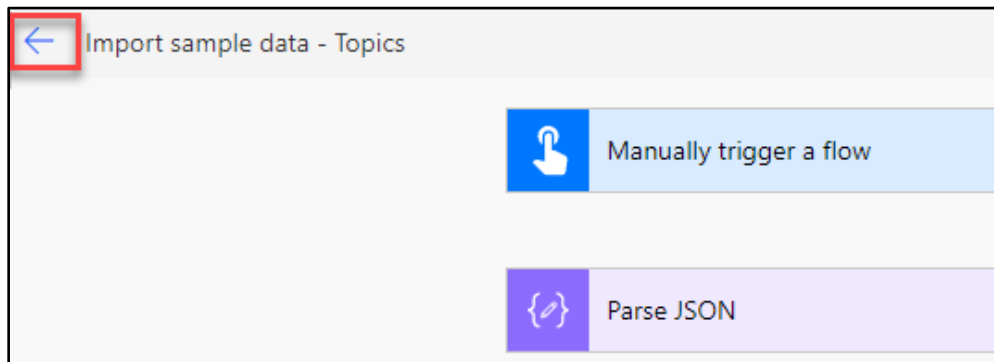

10. Expand the **Apply to each topic** step.

11. Expand the **Apply to each topic item** step.

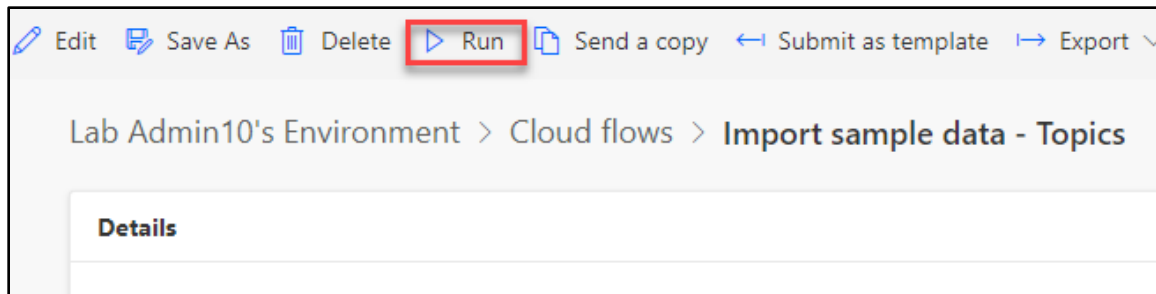

12. The apply to each step should look like the image below. This is the logic for the automation.

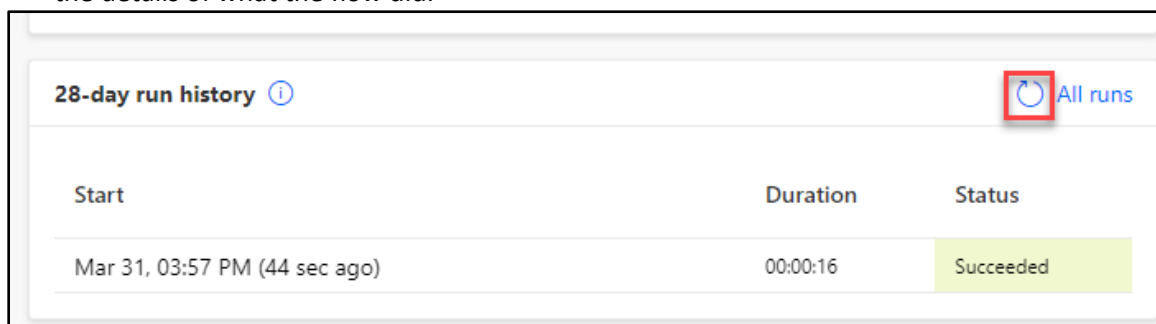

13. Click on the <- **back** button.

14. Click on the flow name to open the flow detail screen.
15. Click Run to run the flow.

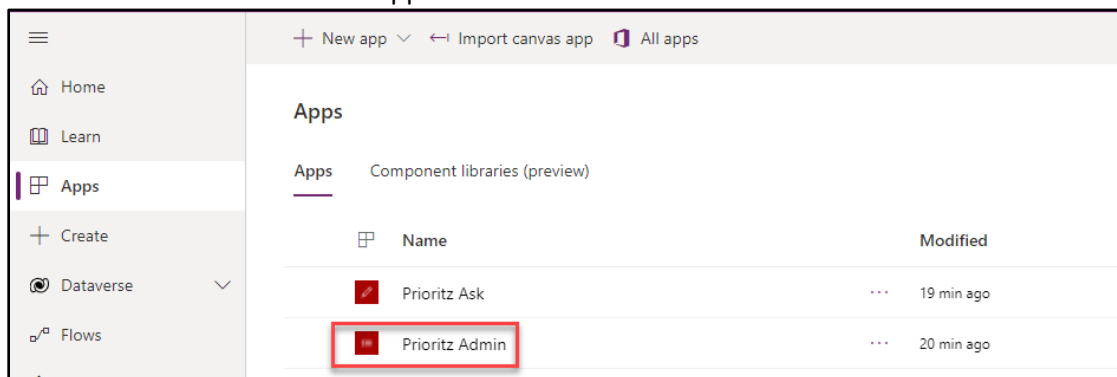

16. Click **Run flow**.
17. Click **Done** and wait for the flow run to complete.
18. The flow should run successfully. If you want, you can click on the run row and it will show you the details of what the flow did.

Task 2: Test the apps

1. Navigate to [Power Apps maker portal](#) and make sure the development environment is selected.
2. Select **Apps**. You should see two applications. **PrioritZ Ask** and **PrioritZ Admin**. PrioritZ Admin app is used to manage topics being asked about. PrioritZ Ask app allows users to respond.
3. Launch the **PrioritZ Admin** application.

4. You should see at least four topics.
5. Click to open one of the topics.
6. You should see the topic details with some topic items.
7. Click on the < back button
8. You should go back to the home screen.
9. Click on the + button.

Contoso Coffee PriortZ Admin <div>+</div> <div>↺</div>	
Event banner	4/4/2022 6:00 PM
Best evening for the annual event	4/4/2022 6:00 PM
Company event theme	4/4/2022 6:00 PM
Annual event raffle idea	4/4/2022 6:00 PM

10. Provide a topic, details, respond by date and click add a picture.

Contoso Coffee
PriortZ Admin

Change Taco Tuesday to some other food

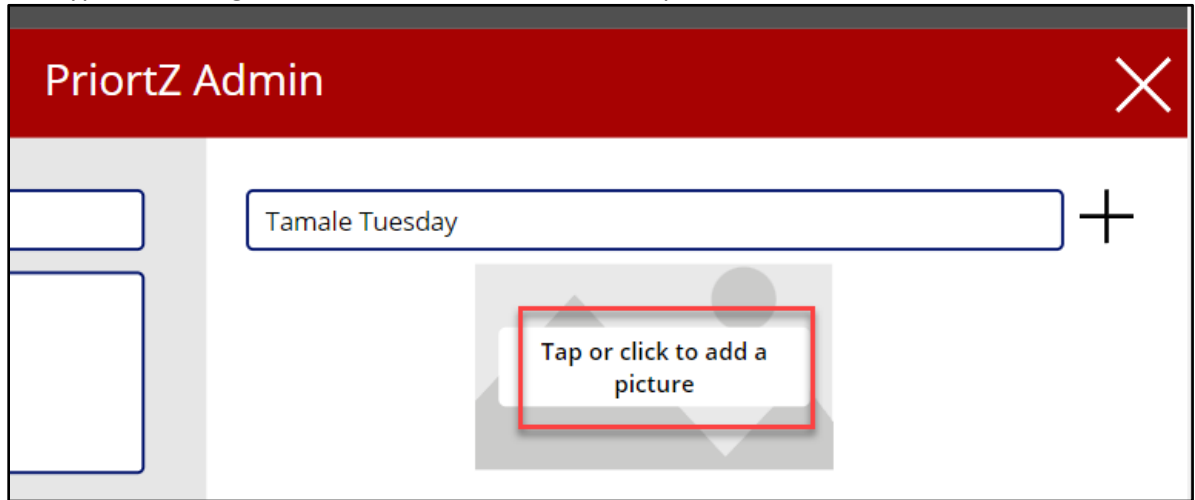

People are tired of tacos, what should we have instead of tacos?

Respond By

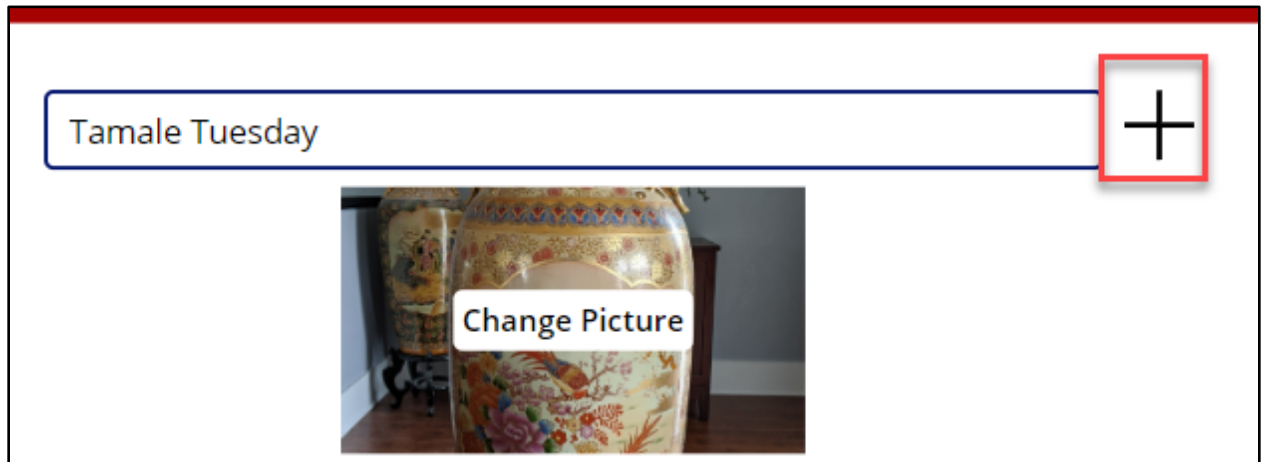

4/7/2022

Tap or click to add a picture

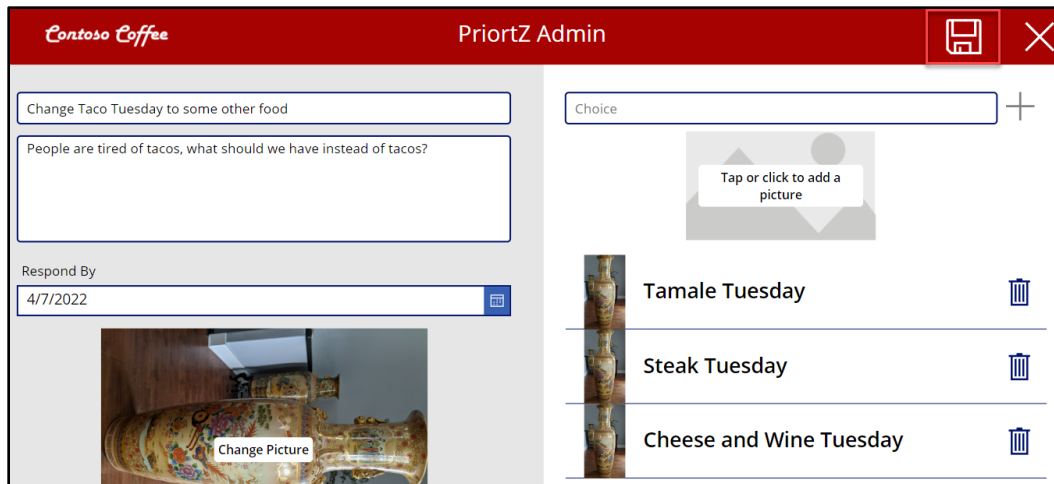

11. Select any image from your computer.
12. Type something on the Choice field and click add a picture.

13. Click + to add the choice.

14. Add couple more choices.
15. Click **Save**.

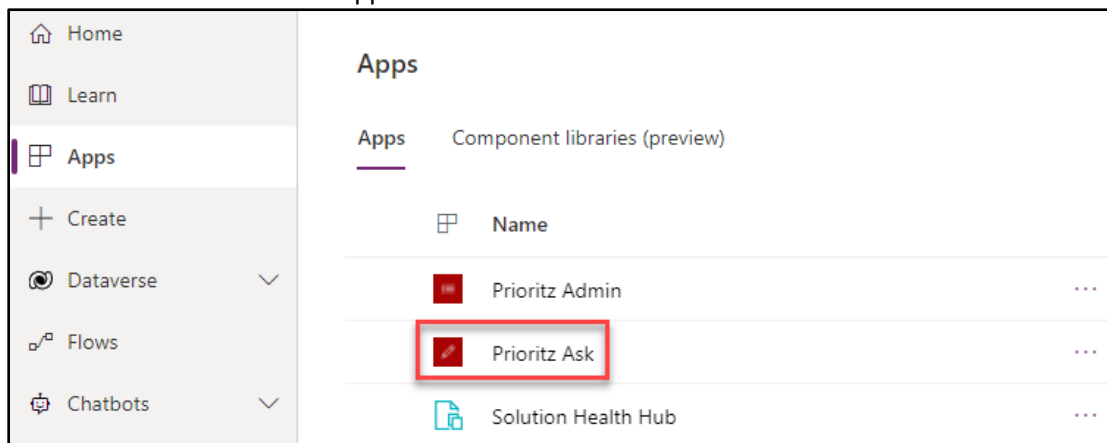

16. The new topic should be saved, and you should be navigated back to main screen.

17. You should see the topic you added in the list of topics.

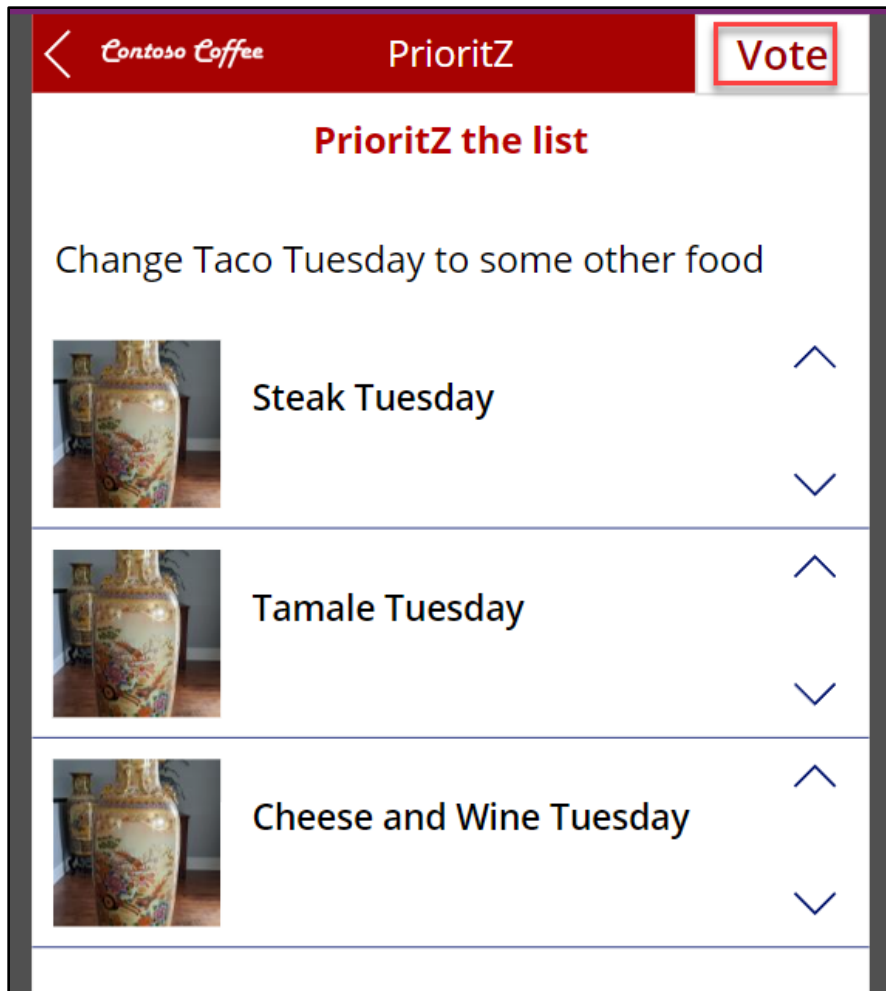

18. Close the PrioritZ Admin application.

19. Launch the **PrioritZ Ask** application.

20. You should see a list of topics. Open the topic you created.

21. Click on the up/down icons and order the items in the order you prefer them and click **Vote**.

22. You should be navigated back to the main screens, and you should see a notification message.

23. Close the PrioritZ Ask app.

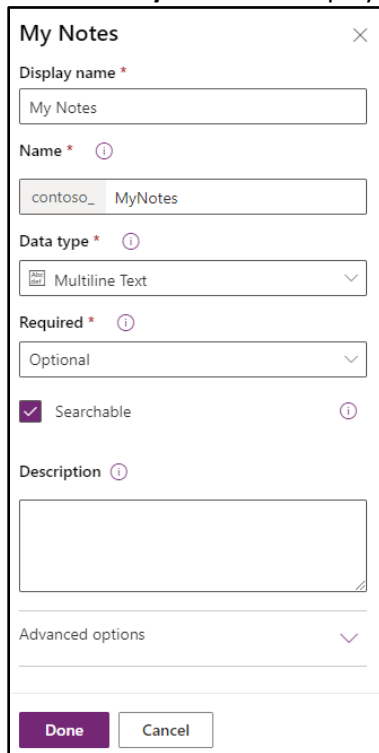

Exercise 4 – Add a column for My Notes

In this exercise, you will add a new column **My Notes** to the topic table and update the PrioritZ Admin application.

Task 1: Add a new column

1. Navigate to [Power Apps maker portal](#) and make sure the development environment is selected.
2. Select **Solutions** and open the **PrioritZ** solution.
3. Expand **Tables** and select the **PrioritZ Topic** table.
4. Select the **Columns** tab and click **+ Add column**.

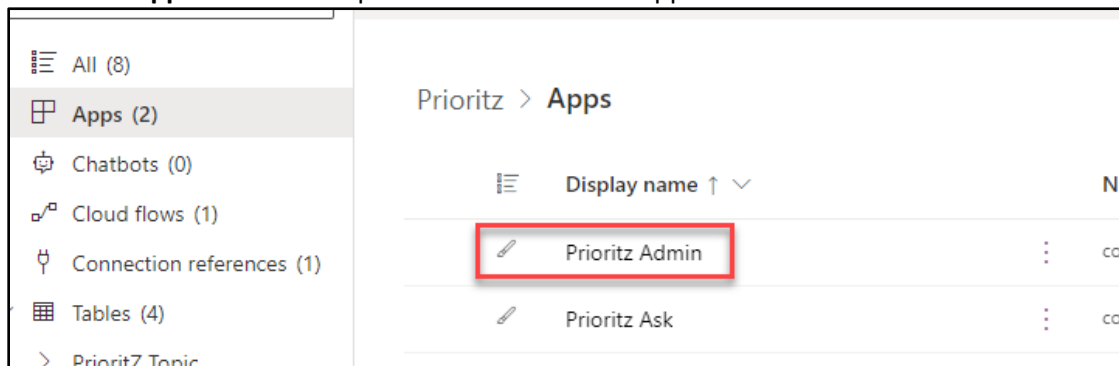

5. Enter **My Notes** for Display name, select **Multiline Text** for Data type, and click **Done**.

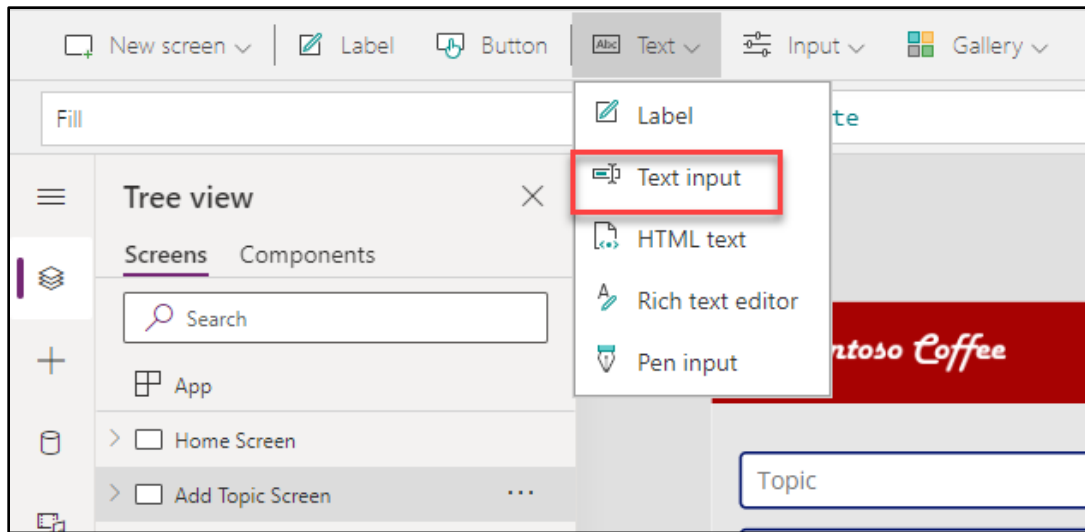

6. Click **Save Table**.
7. Do not navigate away from this page.

Task 2: Update admin app

1. Make sure you are still in the **PrioritZ** solution.
2. Select **Apps** and click to open the **PrioritZ Admin** application.

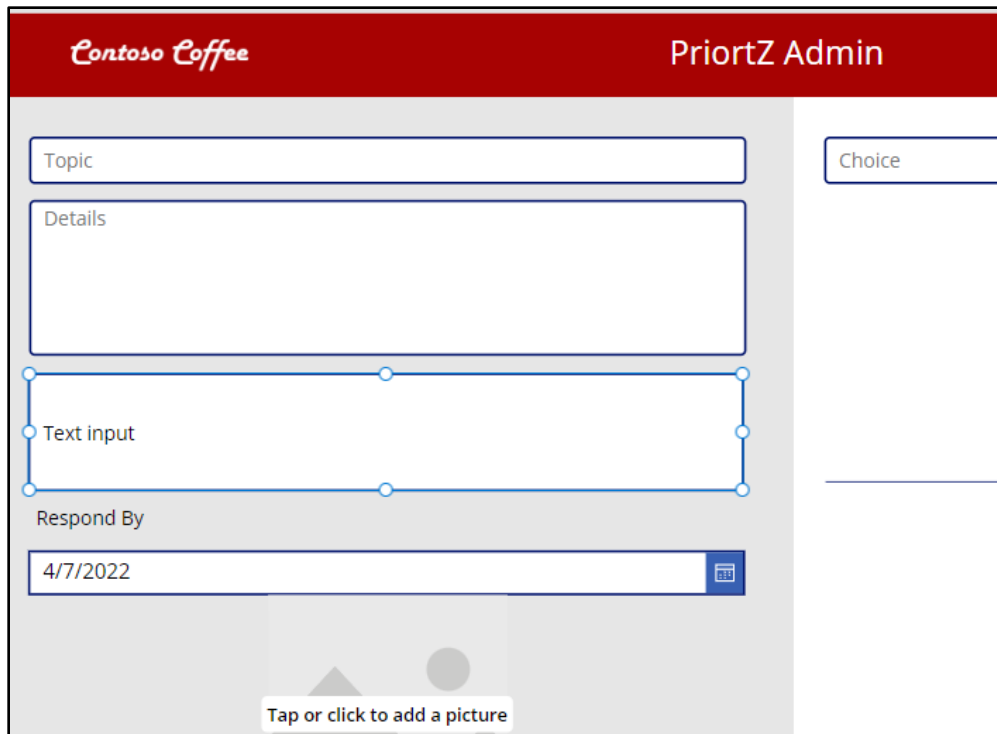

3. Select the **Add Topic Screen**.
4. Select the **Insert** tab, click **Text**, and then select **Text input**.

5. Rename the text input **Notes textbox**.

6. Make the add picture control smaller if needed and move the respond by and label textbox down and place the Notes textbox between the Details control and the Respond by label.

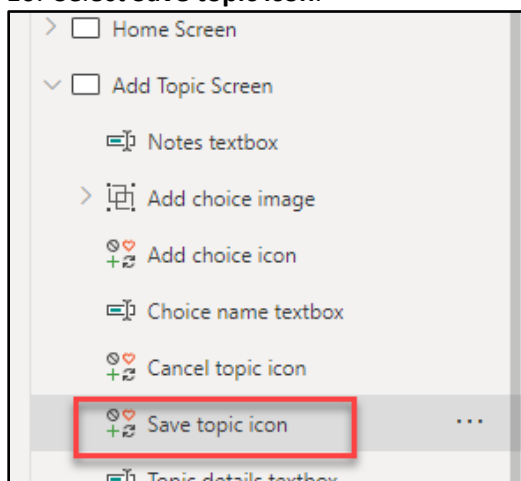

7. Select Notes textbox.

8. Change the **HintText** value of the Notes textbox to **My notes**.

9. Change the **Mode** to **TextMode.MultiLine**.

10. Select **Save topic icon**.

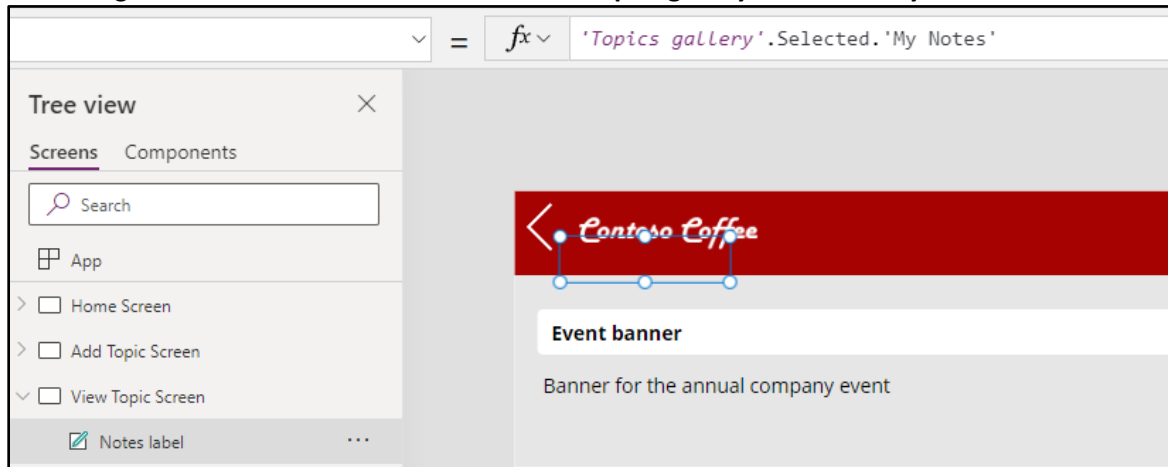

11. Replace the **OnSelect** formula of the **Save topic icon** with the formula below. The Patch creates the new row in the Dataverse table.

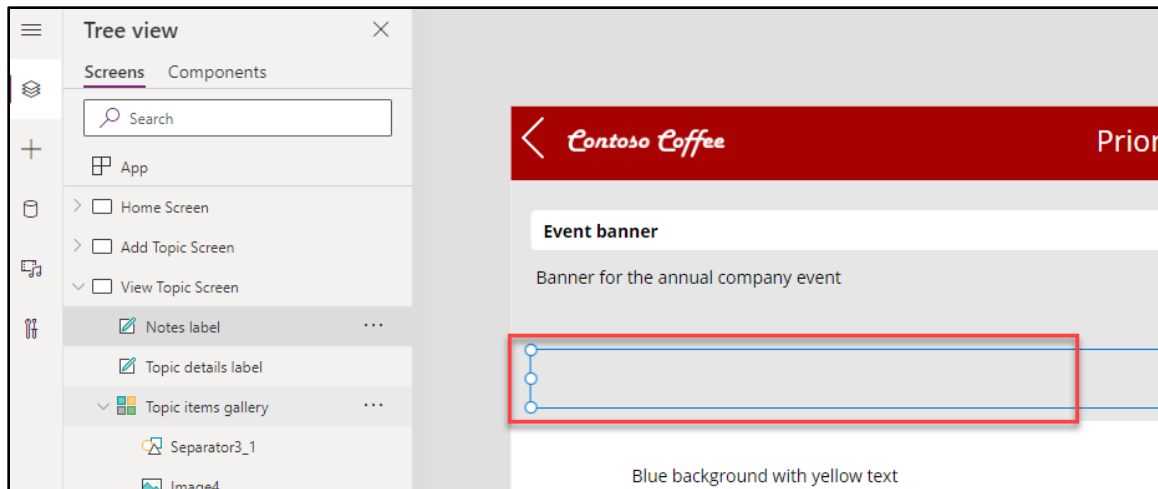

```
Set(newTopic,Patch('Prioritz Topics',Defaults('Prioritz Topics'),{'My Notes':
'Notes textbox'.Text,Topic:'Topic name textbox'.Text,Details:'Topic details
textbox'.Text,'Respond By':'respond by date
picker'.SelectedDate,Photo:AddTopicImage.Image}));ForAll(colAddChoices,Patch('P
rioritz Topic Items',Defaults('Prioritz Topic
Items'),{Choice:ThisRecord.choice,'PrioritZ
Topic':newTopic,Photo:ThisRecord.photo}));Back()
```

12. Select the **View Topic Screen**.
13. Go to the **Insert** tab and click **Label**.
14. Rename the label you just added **Notes label**.
15. Change the **Text** value of the Notes label to **'Topics gallery'.Selected.'My Notes'**

16. Rearrange the controls and move the **Notes label** between the details label and Topic items gallery.

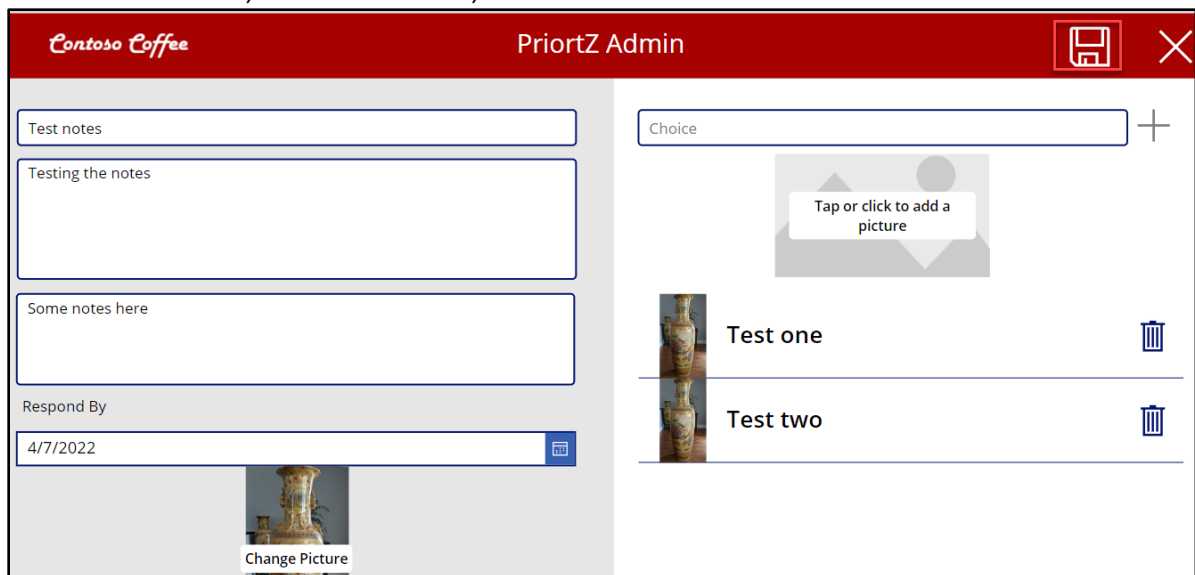

17. Select the **Home Screen** and click **Preview the app**.

18. Click **+**.

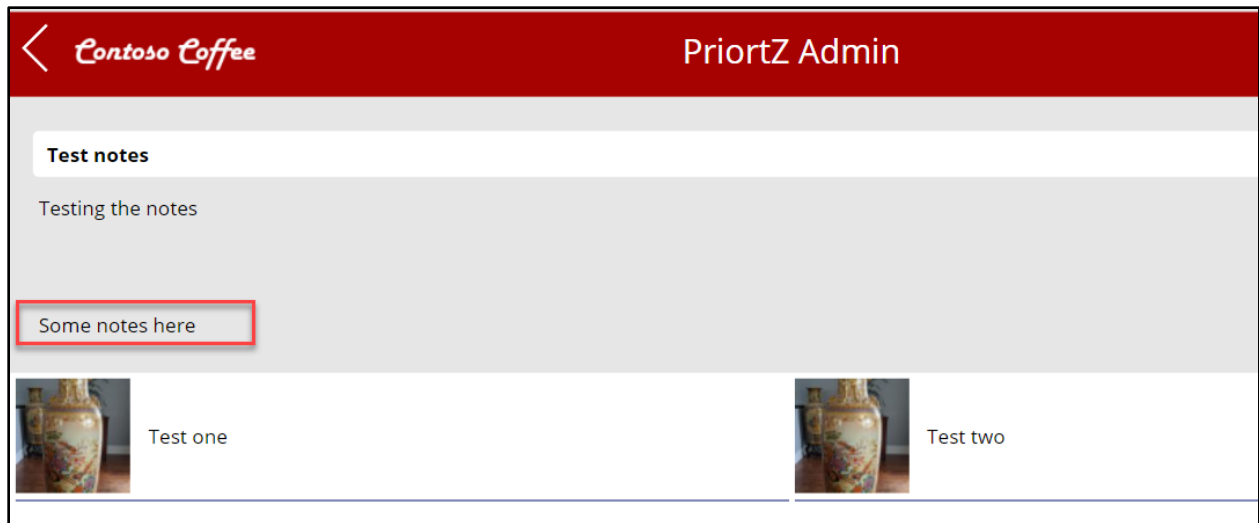

19. Fill out the form, add some choices, and then click **Save**.

20. The new topic should be saved.

21. Click to open the topic you just created.

22. The notes should now be shown.

23. Close the app preview.
24. Click **File** and select **Save**.
25. Click **Publish**.
26. Select Publish this version and wait for the publishing to complete.
27. You may close the app designer.

Exercise 5 – Install Visual Studio Code and Power Platform CLI Extension

In this exercise, you will install Visual Studio Code and Power Platform CLI. These tools are used in the labs in this course.

Task 1: Install Node Package Manager

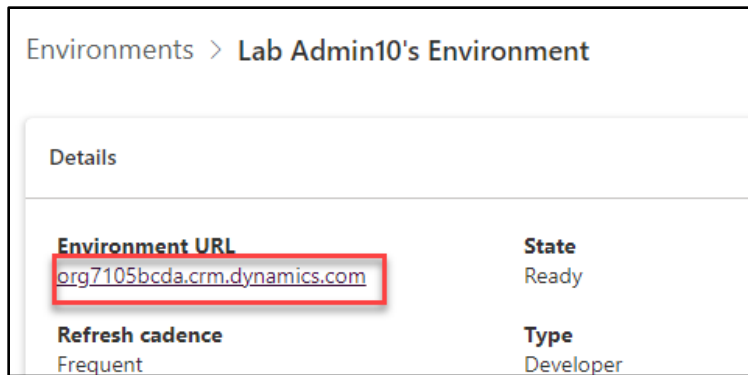

1. Install [Npm and Node.js](#) We recommend that you use LTS (Long-Term Support) version 16.14.2 or higher.

Task 2: Install Visual Studio Code

2. Navigate to [Visual Studio Code](#)
3. Download Visual Studio Code and install it if you don't already have it installed.
4. Navigate to [Visual Studio Marketplace Power Platform Tools](#)
5. Click **Install**.
6. Click Continue.
7. Wait for the Power Platform Tools to be installed.

Task 3: Test the Power Platform CLI

1. Navigate to [Power Platform admin center](#) and select **Environments**.
2. Click to open your dev environment you created.
3. Copy the Environment URL and keep it in your clipboard or on notepad.

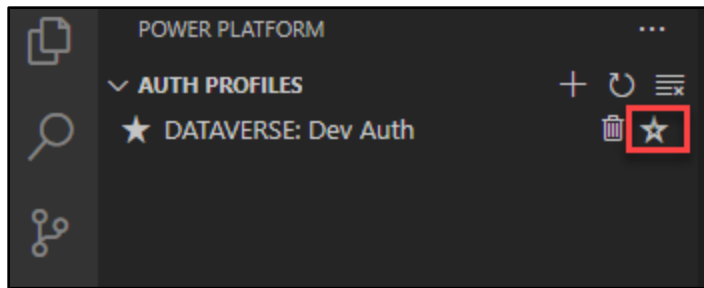

4. Open Visual Studio Code.
5. Select the **Power Platform** tab and click **Add Dataverse Auth Profile**.

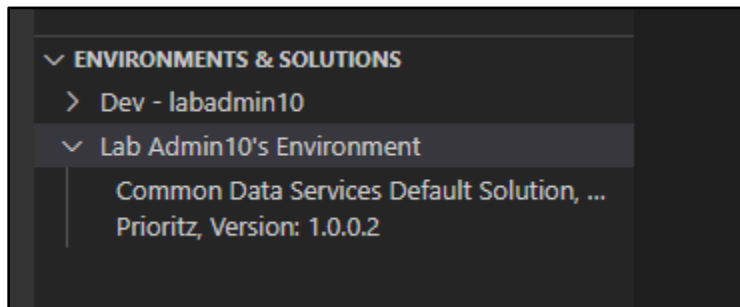

6. Paste the environment URL copied and [ENTER].

7. Provide your credentials and sign in.
8. Right click on the auth profile you created and select **Name/Rename Auth profile**.
9. Rename the profile **Dev Auth**.
10. You should now have at least one auth profile. If you have more than profile, make sure the profile you created is selected.

11. Go to the Environments & Solutions pane and expand the environment you are using for this lab.
12. You should see all the solutions in the environment.

13. Click **Terminal** and select **New Terminal**.

14. Run the command below to see list of solutions.

```
pac solution list
```

15. You should see list of solutions installed on your environment.
